Slovenia server location request Deployed

- VP Vjeko Pavlinic
- **Forum name:** #Suggestion

Please consider adding Slovenia as a server location. It is located in the heart of Europe, and there is a significant community of Slovenian people around the world. Adding this location would provide your users a valuable connection directly within Europe. The general network infrastructure within Europe is extremely advanced, with Gigabit and optical networks present throughout its capital Ljubljana. The cost of Internet Service in Slovenia is also one of the most competitive in Europe.
