I can't access the internet when I disconnect from the VPN. I'm not using the killswitch (Windows)

Kaneesha D. - 2019-05-21 - in Connection

The culprit of this issue is likely the DNS leak protection setting. Most times a reinstallation of the application should resolve any DNS resolution issues however if this is related to a network block/filter we recommend adding the PIA DNS servers to your Network Adapter manually. You can find a guide on how to do this in the Guides>Windows section [here](#).
