## What ports are used by your VPN service?

Kaneesha D. - 2018-05-29 - in Questions

In order to connect to our service using one of the VPN methods we provide, please verify you can connect over these ports:

- For OpenVPN connections UDP ports **1194, 1197, 1198, 8080, 9201** and **53** as well as TCP ports **502, 501, 443, 110, 80**
- L2TP uses UDP **500, 1701**, and **4500**
- PPTP uses TCP **1723** or **Protocol 47** (GRE)

If you can connect over any of those, you should be able to use at least one of our connection methods.

In addition, the PIA application pings our gateways over port **8888**. This is used to connect you to the server with the lowest latency when you use the auto connect feature.

We also have more in-depth information on our OpenVPN ports including the protocols, settings and certificates that should be used with them in this article.
