December 17, 2019 - iOS Release v3.3.0

2019-12-17 - Michael B - in Announcements

We are happy to announce the latest release of our iOS application, version 3.3.0.

Along with stability improvements, we have implemented a Quick Settings Tile which will allow you to open InBrowser from within the application. InBrowser, a browser created by our teams at Private Internet Access, is a private browser for iOS which will erase all data saved, during use, once the application is closed out. The data that is erased upon closure includes all history, all cookies and any sessions . You can read more about InBrowser here:

<https://www.inbrowserapp.com/>

As always, any feedback you may have for the iOS application is welcome and very much appreciated.
