## Open Source: Releasing the PIA iOS Client

2018-06-18 - Jayson Q. - in Announcements

Today we are excited to announce that we have released the PIA Client for iOS as part of our policy to Open Source all our applications. The client integrates with our previously released client library for Apple platforms.

We ask for community participation and collaboration for the benefit of all who seek privacy and security in the current age. Please do not hesitate to join us in [#privateinternetaccess](#) on freenode if you want to get involved, or fancy chatting about our open source initiative.

We still have quite a few repositories left to release, and we look forward to sharing more of the PIA codebase with you over the coming months.

You can find previously released repositories over at our [GitHub page](#), please do submit pull requests, make feature requests and get stuck in! We want your feedback so that we can continue to provide the best service and features we possibly can.
