Removal of v2.5 of our Desktop Application

2020-10-15 - Michael B - Announcements

As a result of some issues that we have discovered within our desktop application, v2.5, we have removed this version for further thorough testing and for rolling out fixes for the issues, which may impact functionality in some cases. If you are experiencing issues after upgrading to v2.5, in which you experience a spinner, you are unable to open the application, or no servers populate in the server list, please revert to v2.4, which can be downloaded on [this page](#).

We apologize for any inconvenience caused by this issue.
