Split Tunneling on Monterey

2022-05-09 - Devin S - Announcements

While using MacOS Monterey, you may notice that you are unable to use the Split Tunneling feature within the VPN client. Our team has been working with Apple on a resolution for this issue, but we do not currently have a timetable for when a solution will be implemented. While our team works to address this matter, you can [reach out](#) to us for suggestions on alternative solutions. We appreciate your patience as we work to make this feature available for our Monterey users!
