

Succession of Tunneling Protocols

2021-01-07 - Devin S - Announcements

With the transition of providing our users with the next generation of service, we've chosen to move toward and focus on an improved, more capable infrastructure to support the protocols we currently offer within the PIA client. Along with making this transition, support for the L2TP and PPTP protocols have been discontinued. As our focus is taking progressive steps to provide better service for our users, we've chosen to cease support for these protocols in favor of paving the way for secure, up to date protocols.
